

BLUE LANTERN MODULES

BLM Voks Analog Filter

~~\$150.00~~ \$103.00**BLM Voks VCF**

Width: 6hp

Current: 13mA, -13mA

What does this do?

This is an analog filter based on the polivoks filter. This module has my hacks from the past. All the parts have been modernized and the filter sweep has been optimized. This was one of my first modules released back in 2009.

Blow Out pricing will supplies last. The chip is from my old stock. If you always wanted one, get one now or regret it later.

Features:

- Normal Mode and Unstable Brite Mode
- Internal Limiter Diode, selected by switch.
- 12db Low Pass, amplified with its own output.
- 6db Band Pass, amplified with its own output.
- Attenuated Audio Input
- Direct Audio Input
- CV direct input
- Bi-polar FM input
